DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 6 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The phrase "each of the pads per se having a concave surface" is not supported by the originally filed specification hence is deemed to be new matter.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hosomi et al in view of Duboz.

Regarding claim 6, Hosomi discloses on figure 20 a structure comprising a semiconductor device having bumps 6; a board 1a having pads so that each of the bumps is joined to a corresponding one of the pads...; and an insulating adhesive 3

provided between the semiconductor device and the board wherein an end of each of the bumps has a diameter smaller than other portions of the bumps so as to facilitate deformation of the pads when bumps are pressed against the pads and to form a space in which the insulating adhesive is filled, and wherein contraction of the insulating adhesive maintains joints of the bumps and the pads, said joints being made by deformation of the pads. Hosomi does not disclose each of the pads per se having a concave surface with which a corresponding one of the bumps contacts. However, Duboz et al discloses on figure 5 each of the pads 58 per se having a concave surface with which a corresponding one of the bumps contacts 67. In view of such teaching, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Hosomi by having each of the pads per se having a concave surface with which a corresponding one of the bumps contacts for the purpose of enhancing the bonding between the pad and the bump.
